Software Engineer / Full-Stack Developer
Москва, Москва, Россия

Общие сведения

Despite majoring in a not-very-down-to-Earth field, I decided to study finance, investments, stocks and global markets to become a professional financial analyst.

Working as a business analyst and an asset manager handling multiple European (German, Spanish, British, Turkish) companies and 10 million USD assets allowed me to develop both soft and hard skills: teamwork, business communication, business ethics, networkring along with advanced Excel skills, financial modelling and group management. My previous work experience allowed me to live in various countries (Malta, UAE, Turkey).

Although I'm no longer looking for new career opportunities in finance, I'm glad I've tried the path and I've been lucky enough to gain such crazy hands-on experience and meet new people to broaden my worldview.

It took me several years to realize what field I'd genuinely like to build a prosperous career in: software engineering and web development. The world of IT is what truly attracts and fascinantes me, especially, how vast it is and what opportunities it has to offer.

Learning and equipping yourself with a totally new skillset, obviously, take a decent amount of time but the bitter -- and sweet -- truth is learning never ends. With a motto like this in my mind, I've embarked on a new career.

General skillset: English, German, Spanish and Turkish, business communication, Excel, VB.
Current IT skillset: Python (Backend, Selenium, WebSockets, RegEx), Django, Flask, HTML5, CSS3, JS (Frontend), SQL.
Also I'm going to learn: JS (Angular, React, Vue, Node.js), Go, Ruby (Ruby on Rails), C and C#.

Furthermore, I'm interested in (on par with full-stack development) ML, AI, robotics, open-source, cloud computing, game development (Unity), hackathons, computer science and solving problems on LeetCode.
